

SIKA Test and Calibration Equipment

SIKA[®]
founded 1901
Dr. Siebert & Kühn GmbH & Co. KG

Temperature Calibrators

Temperature Calibrators series TP 17 000 M

SOLAS ISM regulation

In 1998, the International Safety Management (ISM) code was adopted by IMO and became mandatory on certain ocean going vessels. In 2002 the Safety Of Life At Sea (SOLAS), Chapter IX and the ISM code applies to all ships. Our calibration equipment (temperature calibrators and pressure calibrators) will enable ship owners and marine engineers to comply with the SOLAS regulation for maintenance standards. We advice a recalibration of the calibrator with a cycle between 1 and 2 years depending on strain.

The recalibration comprises:

- **On board:**
SIKA Recalibration Set see page 40
- **SIKA in house:**
Calibrator adjustment (only made by SIKA DKD laboratory) with output certificate

Economic and safe!

Exact temperature measurement and monitoring are "musts" in applications crucial to operational safety of machinery and industrial installations.

Regular inspection of the temperature sensors used in these applications is essential for economic and technical safety reasons and is already prescribed as obligatory in many sectors.

The temperature calibrators and calibration bath are already a part of the standard equipment of the technician in the above listed sectors. These compact devices are easy to transport and easy to operate and have all performance features required for "in-situ inspection".

For inspection of

Thermometers/SIKA thermometers

Inspection is performed by comparison of the temperature measured by the test piece and the block temperature indicated by the calibrator / calibration bath.

Temperature switches/thermostats

The test piece is inserted into the block and connected to the external transducer. The switch setting respective to the switch point is signalled by reached temperature.

Resistance thermometers and thermocouples

The inspection is performed by comparison of the temperature indicated on the external measuring instrument with the reference temperature of the calibrator or calibration bath.

Description

The calibrators of series TP 17 000 M contain an electrically controlled metal block with a bore for the insertion of the test piece. Adapter sleeves are used for test pieces with smaller diameter. The block is mounted in a heat insulated housing.

The complete electronic is located in the front of the calibrator. The required temperature is easily set on the digital controller.

The current temperature will automatically be adjusted to the set value. The current temperature and set temperature are constantly shown on the 2-line, 4-digit, 7-segment LED display.

For Calibration of indicators and loops, multifunction and pocket calibrators are available on page 49.

Technical data and Order code

Device type	TP 17 165 M	TP 17 650 M
Temperature range	-35 °C up to 165 °C	Ambient temp. up to 650 °C
Block temperature control	Digital PID controller, automatic fine adjustment with softstart for fan	
Tolerance	±1 °C	±1 °C
Stability	± 0.1 °C	
Block temperature display	4-digit, 2-line, 7-segment LED, 7 mm high, red and green	
Display range	-50.0 °C up to 165.0 °C	0.0 °C up to 650.0 °C
Resolution	1 °C

Pressure Calibrators

Precision Pressure Calibrator, Series PM

Pneumatic and hydraulic pressure calibrators of series PM distinguish themselves especially by high accuracy of measurement and compact type of construction. Reference pressures of -1 up to 1000 bar can be generated in a fast and simple way. Exact adjustment of the desired pressure is carried out by a precision adjustment valve. The reference pressure is indicated via an analogue precision pressure gauge or a digital LCD.

The instruments under test are connected to the pressure output of the calibrators by a pressure hose and an adapter. For rough use on the spot the calibrators can be supplied in protection class IP68. Power is supplied by batteries or rechargeable accumulators. The automatic measuring range switch of the PM series grants an optimal resolution with any application. Different measurement units can be selected by pressing a function key.

Technical Data				
Type	P 40.2	P 60	P 700.1	P 1000.1
Pressure Medium	air		pure water or hydraulic oil	
Pressure Range	Vacuum -0.95 bar Pressure 40 bar	Vacuum -0.95 bar Pressure 60 bar	with pure water 0...400 bar with hydraulic oil 0...700 bar	with pure water 0...400 bar with hydraulic oil 0...1000 bar

Recalibration Set for Temperature and Pressure Calibrators

All your Calibration Equipment always available on board!

With dry block temperature calibrators of the TP 17000 M series and the pressure calibrators of the PM series, the vessel have necessary calibrated test equipment according to SOLAS and DNV on board. According to these regulations the test equipment for temperature and pressure must be recalibrated.

Because of this we are able to offer our SIKA recalibration set. Including a reference thermometer MH 3710 for standard calibration requirements or MH 3750 for highest accuracy requirements. With the high temperature probe TF650-6-300, you can measure the actual accuracy of the dry block calibrator. For precision pressure measurement we offer the SIKA pressure reference type D. We deliver the complete equipment in a robust case including all necessary certificates.

Benefits

The advantage is that the test equipment doesn't have to be returned to SIKA. It can be left on board and the crew can make the recalibration on their own. Checking the recalibration set is very easy because only the small case has to be returned once a year.

Procedures

Recalibration of temperature calibrators is done with Recalibration Instrument type MH3710 or MH3750 and Temperature Sensor type TF650-6-300. Recalibration of Pressure Calibrators is done with Recalibration Instrument type D. Every calibrator has to be calibrated to 4 measuring points. The Recalibration Set measures the temperatures of the heating block or the pressure of the pressure calibrator and you have to place the measured values on record.

Content

Temperature Reference MH

in combination with Temperature Sensor TF

Measuring input:	Pt100
Measuring range:	-50.00...650.0 °C
Resolution up to:	0.1 °C
Miscellaneous:	min./max.-memory, hold function, auto-off

MH 3710 (Standard-Set)

- Accuracy 0.3% FS

MH 3750 (Premium-Set)

- integrated alarm and data logger function
- User-specific characteristic curve of sensor
- Real-time clock with day, month and year
- Measured value memory 16200
- Accuracy $< \pm 0.2$ °C

Sensor TF 650-6-300

High-precision temperature sensor suitable for MH 3710 and MH 3750 long-time temperature stable

Measuring range:	-50...650 °C
Sensor:	stainless steel tube D = 6 mm, L = 300 mm
Cable / Handle:	PVC cable (1 m) with 4-pin Mini-DIN-plug

Pressure Reference Type D

High-precision digital manometer with versatile pressure measuring instrument.

- μ C based with internal EEPROM
- piezoresistive pressure transducer
- pressure- and temperature tested
- min./max.-memory, hold function, auto-off

Pressure ranges	-1...40 bar 0.01
	0...350 bar 0.1
	0...700 bar 0.2

Accuracy $< \pm 0.1$ % FS

Temperature range 0...50 °C

Protection IP65

Certificates

SIKA will issue all necessary certificates so that you are able to fulfill the official requirements.

Order code

	Range	Accuracy		Model	SIKA Order code
Standard Recalibration Set					
Set 1	650 °C	0.3% FS	hand held instrument temperature reference sensor certificate temperature (2 points)	MH 3710 TF650-6-300	EME8RCS-SET001
	40 bar	0.1% FS	pressure reference certificate pressure (2 points)	Ref D (40)	
			transport case	GKK3600-RCS	
Set 2	650 °C	0.3% FS	hand held instrument temperature reference sensor certificate temperature (2 points)	MH 3710 TF650-6-300	EME8RCS-SET002
	700 bar	0.1% FS	pressure reference certificate pressure (2 points)	Ref D (700)	
			transport case	GKK3600-RCS

High Pressure Calibration Set

High Pressure Calibration Set P-HP

With the Calibration Set P-HP you are able to check your mobile hydraulic power units (1) or fuel-injector test rigs (2). These pneumatically supported high pressure pump systems can be equipped with different tools and are used on board for following operations:

- Setting of injection valves
- Assembling / disassembling cylinder cover
- Fixing fundament
- Creation defined torques

The calibration of built-in pressure gauges allow a reliable statement about the accuracy and is therefore decisive to the quality of operations. The connection of digital pressure reference P-HP will be realized via hose adapter to the pressure output of the controlling system. The high pressure calibration set P-HP includes the pressure reference with connection adapter as well as three high pressure hoses and will be supplied in a service case.

Technical data	
Display	Multifunction LCD 20 x 60 mm
Pressure range	0...2500 bar
Pressure media	special hydraulic oil
Tolerance	±0.1 % FS ±1 digit
SIKA Order code	EME8AEB23HP2K0

Accessoires

- Case
- Adapter with quick coupling nipple 2000 bar (male)
- Different high pressure hoses (0.3 m) with quick coupling
 - 1 x red, 2000 bar, female
 - 1 x blue, 1500 bar, female
 - 1 x blue, 1500 bar, male

High pressure calibration set applications

- Hydraulic power unit e.g. IOPmarine (1)
- Fuel-injector test rig e.g. IOPmarine (2)

Hand Held Devices

Series MH - for temperature and pressure

The handy and reliable instruments of the MH range are used for measuring and recording humidity, temperature or pressure. The MH range is very flexible and is equally suitable for simple measurements and special applications.

Sensors and probes

The high accuracy of the signal detection and processing is achieved by means of powerful sensors with electronic linearisation of the characteristic curve. The correct probes are available for a wide range of measuring tasks.

Operating comfort

The innovative design of the attractive housing and the advanced technology make the sensors comfortable to operate. In mobile use, all functions can be selected and carried out easily by pressing the buttons. The membrane keypad guarantees protection against dust and moisture.

Multi-function display

As well as MIN/MAX values, hold function and the selected unit of measurement, various calculation values, such as temperature differential, pressure differential, dew point or heat capacity can also be shown on the multi-function display.

Inputs

Automatic sensor recognition through standard DIN socket provides a plug-&-play solution that is easy to install.

Outputs

Extensive alarm functions via the display, freely scalable standard signal output and buzzer and RS 485 interface.

Data storage (log functions)

Some instruments in the MH range can store data. The integrated memory records up to 16200 measurement values. The date and time is automatically added to the values. A real time clock is integrated for this purpose.

Two **log functions** are available:

- In the STORE mode, data is transferred by means of pressing a button and 99 records can be stored. The values stored are shown directly on the display.
- In CYCLE operation, values are recorded automatically at a pre-programmed interval. 1800, 2700 or 5400 records can be stored. The stored values are shown on a PC.

PC-Interface

To transfer the measurement values and stored values to a PC, the majority of the MH instruments are fitted with a serial interface.

The EBS9M software packages are available with extensive recorder and display functions, as is the SOFT3050 for evaluation of the logged and alarm values. Process sequences can then be monitored and analysed clearly using the measurement procedures recorded and visualised, and all data can be exported into standard programs (e.g. Excel).

Alarm & time displays

A visual and acoustic warning signal indicates when measurements exceed or fall below a programmed alarm point. Transmission via PC is also possible. All data can be displayed with the year and date, thanks to the real time clock.

User-defined characteristic curve MH3750

With this function, customer-specific curves can be used, alongside the standard calculation of the resistance/temperature characteristic curve in compliance with EN60751.

The MH3750 has a very high accuracy of measurement. In order to be able to exploit this high degree of accuracy, appropriate high-quality temperature sensors must be used. Various standard classes of accuracy are available for this purpose.

For applications that require a very high degree of accuracy which is higher than the accuracy of the sensor itself, it is recommended that the sensor be calibrated to the MH3750 by means of a user-defined characteristic curve.

Explosion protection

Hand held pressure measuring devices and pressure sensors are available in EXI versions (EEx ib IIC T4-03ATEX0136X).

Optional for MH 3161 and MH 3181

Simulators

Universal Pocket Calibrators and Multifunction Calibrators

Universal pocket calibrator, series UC

- Digital, menu driven value adjustment, 6 keys and navigator
- Background-lit, graphic LC-display, 160 x 160 pixel
- Step-, ramp-, cycle-, HOLD- and scaling functions
- Serial USB PC interface (type mini B)
- Power supply via 4 x 1.5V batteries (AA type)
- Dimensions approx. 160 x 85 x 45 mm / weight approx. 300 g

Universal multifunction calibrator, series MC

- Digital, menu driven value adjustment, 22 keys and navigator
- Background-lit, graphic LC-display, 240 x 320 pixel
- Step-, ramp-, cycle-, HOLD- and scaling functions
- Serial USB PC interface (type B)
- Power supply via internal accumulator incl. power pack (230 VAC)
- Dimensions approx. 210 x 110 x 50 mm / weight approx. 900 g
